Project Summary

Our project allows users to find hikes/trails in Canada/U.S. based on their preferences. Users can also read and write reviews and give ratings to the hikes/trails.

Schema Changes

We added relations for Needs, View, Saves, and Has. We also added proper foreign keys to Hike1, Hike2, and Location2. We also added the missing foreign key handling to many relations. We did all of this based on the feedback we received from our TA. No other changes were made.
